

B Scope of independent reproduction

Spatial pattern	reproduced
Mean rate	reproduced
Amplitude ratio	reproduced
Cumulative history H001 detrended cross-geometry correlation $r = 0.007$ ascending -120.7 mm vs descending +1.1 mm	NOT reproduced

Retained cumulative endpoint totals are shown; per-epoch series were not retained and are NOT reconstructed. Independent reproduction extends to the spatial and mean-rate characteristics only — the ascending and descending H001 cumulative series differ substantially.
